

**Does your CNC Plasma Oxy-Fuel Machine look like this?
If so, call us!**

Do you have an aging CNC Plasma Oxy-Fuel cutter? Automated Plasma Oxy-Fuel machines need attention and updating over time. Plasma Technologies offers retrofit services to fit your budget and timeframe. We build the retrofit to meet your needs designing the drive system and operator's console to your exact specifications. Every system is hand wired and tested before shipping, reducing costly trouble shooting time.

All of our components have been proven to be rugged and reliable in harsh industrial environments. We have systems running throughout North America with excellent reliability.

- Reduce downtime with quick installation.
- Customizable options, providing you with everything you need without paying for unnecessary extras.
- All operations controls conform to NEMA electrical safety standards.
- Easy installation with plug-in modules.

Plug and Play Retrofitting

Our interfaces make installation a breeze. Simply connect the components together with prebuilt cables. This reduces install time and wiring mistakes.

Our integrated drive and operator's panels

reduce the clutter of wires and cables running to the front of the machine. Most connections are made at the rear of the beam. This also eliminates having to make connections in awkward places to connect

the CNC or operator's panel.

Services & Features

- Design and build custom systems to fit any type or brand of cutting machine.
- Custom interface solutions for any existing system.
- All retrofits come with a 1-year warranty on parts and service.
- Unless otherwise noted each retrofit comes with installation and training.

Let Plasma Technologies help with your next retrofit. We'll save

you time and we guarantee you will be happy with the results. If you have a technical team that wants to do the retrofit we can even provide you with all the hardware you'll need to do the job (i.e. motor mount adapters and pinions). We'll make sure you have everything you need and won't leave you stranded in the field.
